

REMARKS

Independent Claims 1, 17, 33, and 38 are amended to state that the present invention delivers a geographic location of the calling party. Certain dependent claims likewise are revised to maintain a consistent antecedent basis in view of the amendments to the respective parent claims. New Claim 46, dependent on Claim 1, is added to state that the “geographic location is a street address, a building, or a city”.

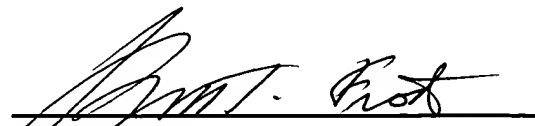

Claim 42 is revised to define the invention as a method for combining a calling party’s geographic location information with an identifier of the calling party in a signaling message, for establishing a connection to carry real-time information. New Claim 44 defines the “calling party identifier” of Claim 42 as a network address, and new Claim 45 further defines that network address as a phone number.

The foregoing independent claims each recite the structural and functional elements, and the overall combines of those elements, as in the claims before the present amendments. Accordingly, the Applicants submit that the claims as herein amended are patentable over the previously applied art, for the reasons set forth in the Remarks of the preceding Response identified above.

Respectfully submitted,

MERCHANT & GOULD
